Intelligent office furniture from Optimum

17th February 2010

Optimum International has released its brand new office furniture range from US design studio BDI.

Designed by Matthew Wetherly of BDI, the Sequel collection offers numerous design features to meet the needs of the 21st century office. Most notably it offers a cable management system that includes wire management and magnetically attached panels that keep all wires out of site yet within easy reach. In addition, an innovative system draw combines a charging station for portable electronics including mobiles phones and digital cameras as well as a keyboard tray and mouse pad. Other distinctive features of this versatile furniture include:

- Fingerprint resistant glass work surface
- Hanging file draws can be used for legal and letter-sized files
- A mobile CPU cabinet equipped with flow-through ventilation
- Superior construction consists of satin finished, nickel-plated heavy gauge steel and richly finished wood panels

Optimum's Managing director John Ogden states: "Home furniture hasn't changed much for the last three decades despite the revolution in technology during that time. We believe that top quality, intelligently engineered office furniture that incorporates today's technology, is what the market is crying out for."

He adds: "Sequel Office is a beautiful yet versatile collection, offering the ultimate in style, function and flexibility for today's office user."

Sequel is available in five models that can be adapted to suit the needs of any environment. The range is available in Natural Stained Cherry, Espresso Stained Oak and Natural Stained Walnut finishes.
